

SharpCloud Overview

- Jonathan Morris – Solutions Consultant

Overview

SharpCloud serves as a powerful **data visualisation tool**, enabling teams to promote **better collaboration, communication and decision- making** when delivering the right projects aligned to strategic outcomes

The impact of operational complexity

Common Organizational Challenges

Wasteful spending within a portfolio of projects

Time to value - Inability to deliver projects or portfolios on time and at budget

Inefficiencies across the portfolio such as wasted time, delayed product release, and poor decision-making

Assessing risk across the enterprise

Common Leading Causes

Lack of integration across tools, technologies and processes

Data disparity

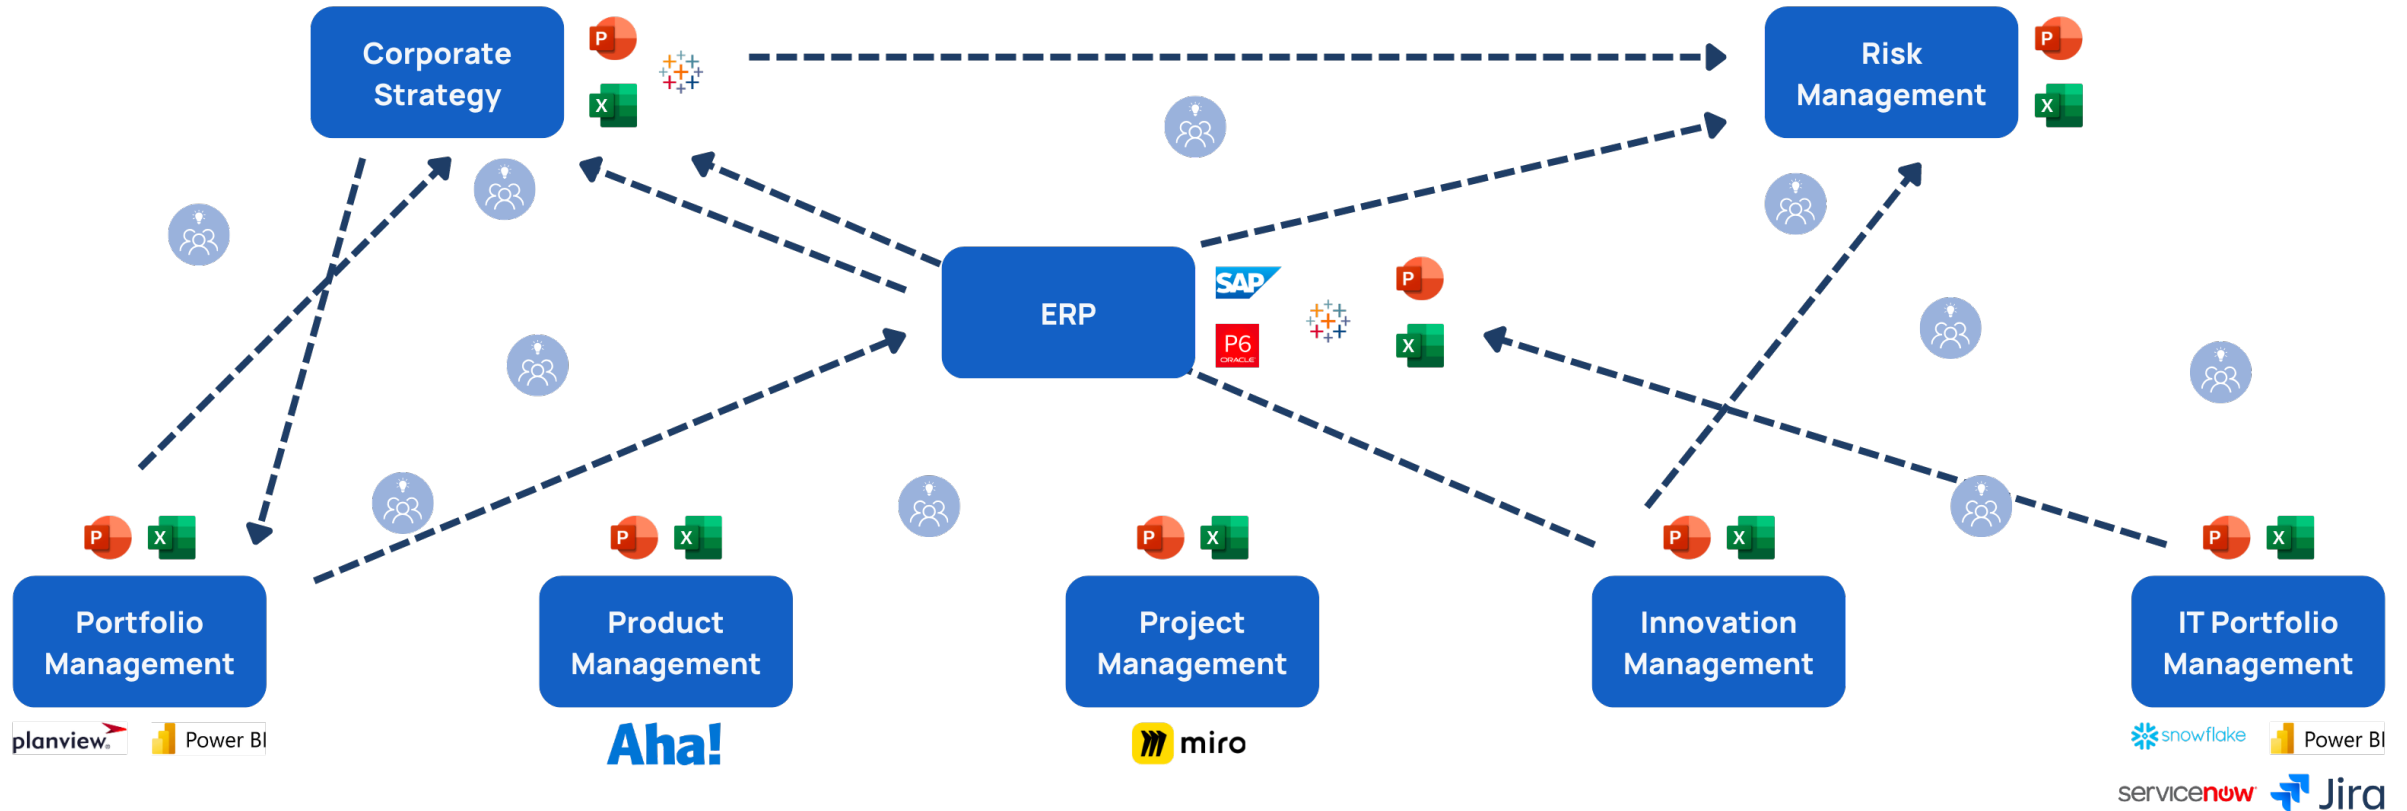

Inability to understand dependencies across projects and portfolios

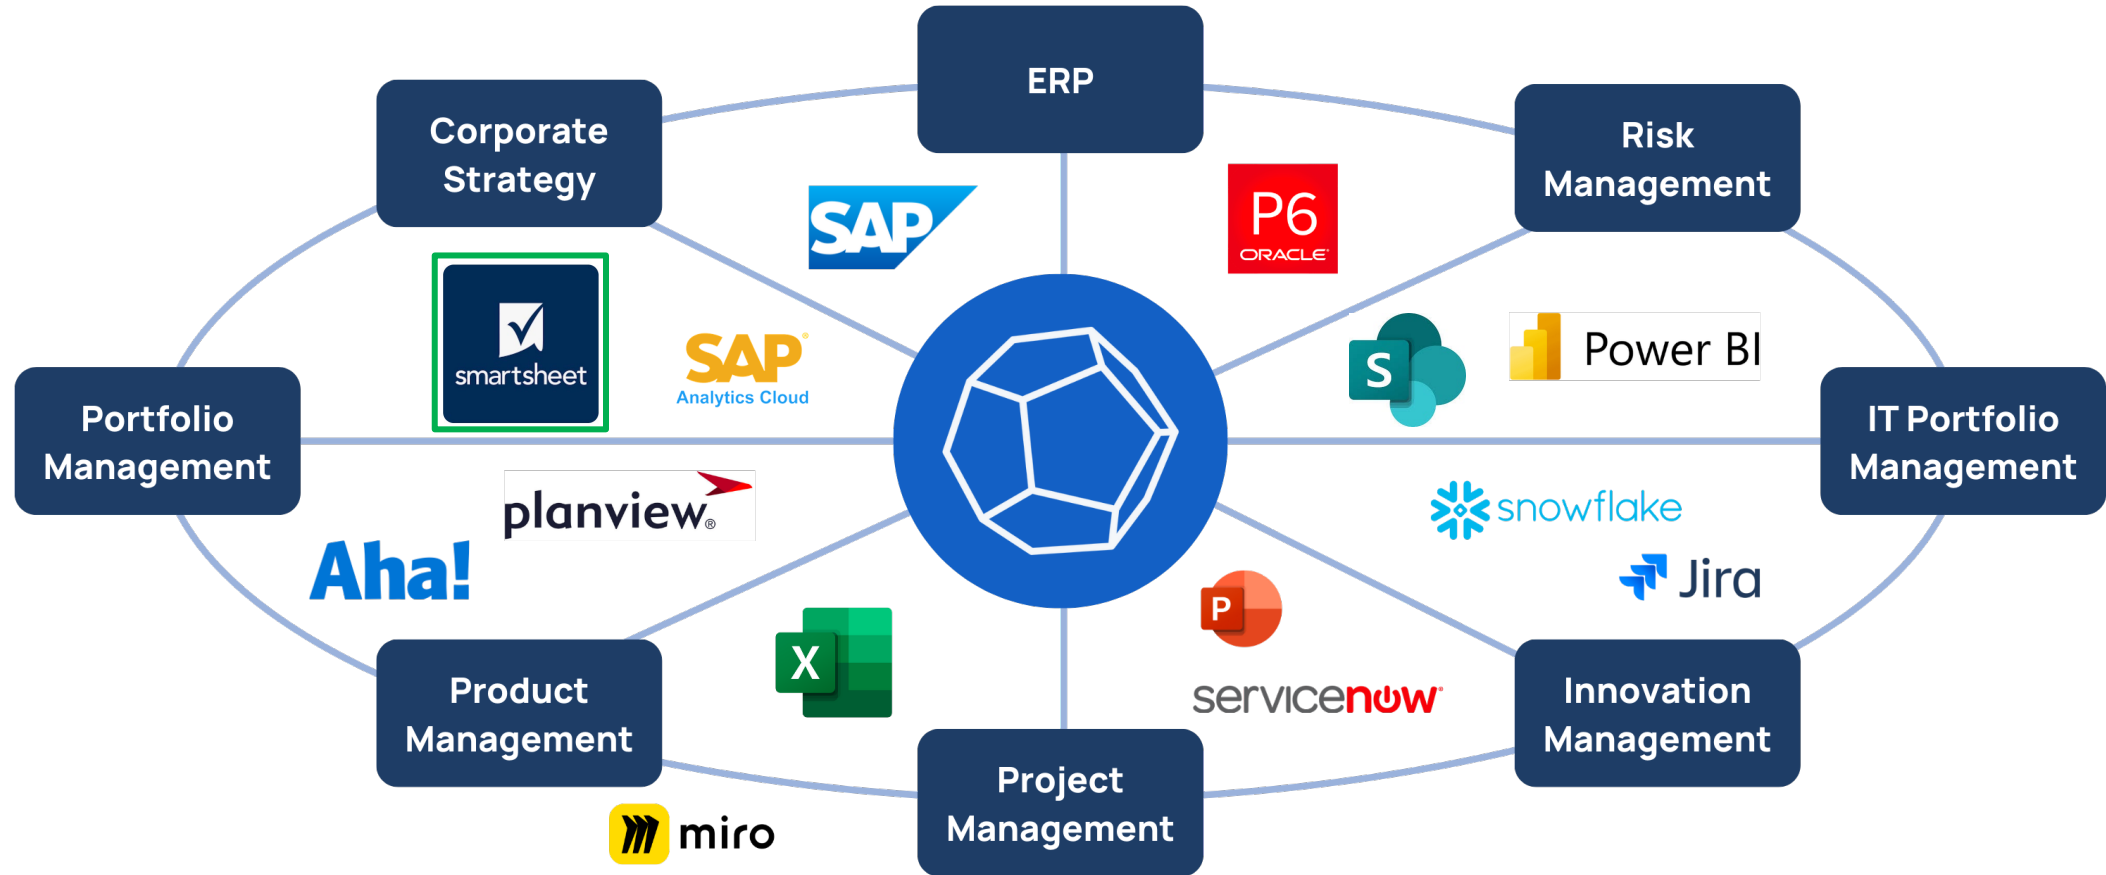

Outdated or ill-fitting tools/processes

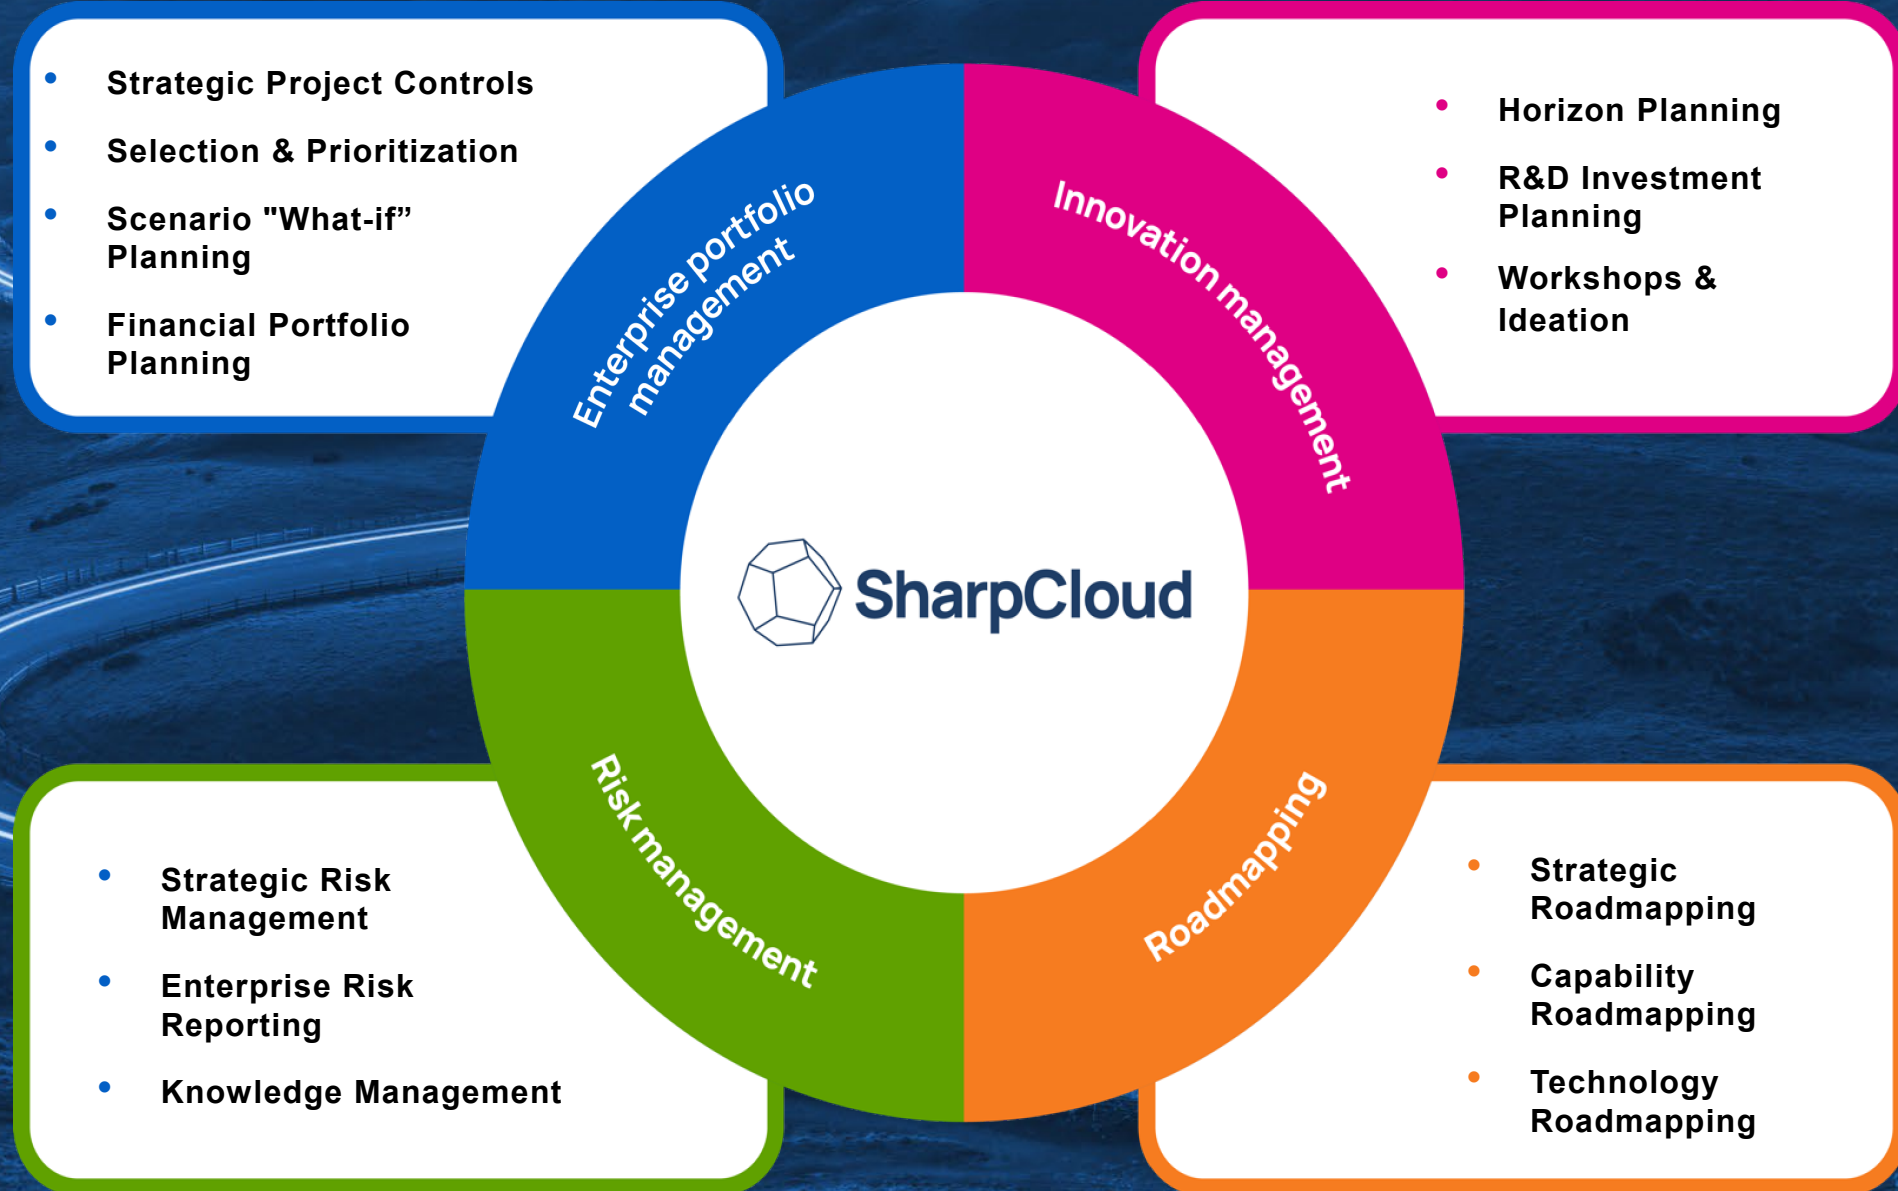

How is this resolved today?

How could it be resolved?

One product, many visual solutions

SharpCloud Overview

- **Visual communication** tool promoting enhanced collaboration, communication and decision making across your business
- **Flexible framework** that collects and centralises sub-sets of data in a data pool various systems and sources (Excel, Oracle P6, Unifier, PPT, SharePoint, Jira, SAP)
- **Connects data** - Highlight relationships, bottlenecks and risks to an organisation's portfolio of work, teams and broader strategy
- **Create 'visual stories and views'** to answer complex business questions and encourage more proactive decision making (matrix, timelines, hierarchy etc.)
- **Customisable** in line with business terminology and branding
- **Leverage best practices** to build-out stories and views with a SharpCloud consultant
