**Imagine; rapid innovation
delivered on time, on cost,
and meeting targets...**

About Synoptix

Synoptix is an engineering company providing solutions and capability across three key areas:

Across these areas, we deliver:

- **Understanding from complexity**
- **Protection from threats**
- **Innovation through technology**

A tailored and pragmatic systems thinking ideology runs throughout all of what we do.

Defence

As the UK defence industry adapts to shifting geopolitical challenges, meeting its growing technological demands is vital to ensuring strong national and global security.

Healthcare

Healthcare systems are highly complex human-cyber-physical environments where chaotic emergent behaviour can affect patient safety. Synoptix is helping transform the sector by applying all three of the company's core capabilities.

Space

From satellite constellations to spacecraft development and mission control, Synoptix enables space programmes to build robust, scalable solutions that drive mission success.

Energy

We're supporting the drive to net zero through sustainable, innovative energy systems. From offshore wind to the new nuclear era, we deliver fresh solutions to technical and programmatic challenges.
